# google Compute Engine

使用notpad++ and putty

#### 首先開新專案

GCP的虛擬機器都要綁定在專案目錄之下進行管理。 進入首頁,點專案名稱位置開啟專案頁面選新增專案

### 建立一台computer

#### 選取自己要的作業系統, 別忘了允許HTTP HTTPS流量 之後按建立

## 建立完成後, 綠色勾勾代表運行中

#### SSH 設定

```
puttytel.exe (a Telnet-only client)
32-bit:
                                                       (or by FTP)
                                                                          (signature)
                  puttytel.exe
64-bit:
                                                       (or by FTP)
                  puttytel.exe
                                                                          (signature)
plink.exe (a command-line interface to the PuTTY back ends)
32-bit
                                                       (or by FTP)
                                                                          (signature)
                  plink.exe
64-bit:
                                                       (or by FTP)
                                                                          (signature)
                  plink.exe
pageant. exe (an SSH authentication agent for PuTTY, PSCP, PSFTP, and Plink)
32-bit
                  pageant.exe
                                                       (or by FTP)
                                                                          (signature)
64-bit:
                                                       (or by FTP)
                                                                          (signature)
                  pageant.exe
puttygen.exe (a RSA and DSA key generation utility)
32-bit:
                                                       (or by FTP)
                                                                          (signature)
                  puttygen.exe
                                    到putty網站下載puttygen.exe
64-bit
                  puttygen.exe
putty.zip (a .ZIP archive of all the above)
32-bit
                                                       (or by FTP)
                                                                          (signature)
                  putty.zip
64-bit:
                                                       (or by FTP)
                  putty.zip
                                                                          (signature)
```

注意keygen設定,按generate X 處一直移動滑鼠直到金鑰產生,key comment: 改成自己的google帳號 Public keyfor pasting into OpenSSH authorized\_keys file: 按save private key儲存金鑰 No key. SSA STATE OF STATE OF THE STATE AND SAME AND SAM +Mby0xgVhXc5M/a9mOurM6CPcmFcuJeMX20ymdmTzFgLnXtpY61PdHFeYeYnUKM Mm6xSbL0ktmxzhim24tUDikFrSwYDuAuF0hZmRPfKHGVbJAATf2BcL ssh-rsa 2048 ca:1b:67:0a:6a:e8:8c:00:dd:6c:89:eb:b9:01:7a:b5 Key fingerprint: hello 123 Key comment: Key passphrase: Confirm passphrase: Actions Actions Generate a public/private key pai Generate Generate a public/private key pair Generate Load an existing private key file Load Load an existing private key file Load Save the generated key Save the generated key Save public key Save private key **Parameters** Type of key to generate: **Parameters** RSA ODSA O ECDSA O Ed25519 OSSH-1 (RSA) Type of key to generate: Number of bits in a generated key: 2048 O SSH ( RSA ODSA ○ FCDSA O Ed25519 2048 Number of bits in a generated key:

### 後期連線失敗解決方案

Connecting
[SFTP] Host key accepted
[SFTP] Invalid private key file or incorrect passphrase
[SFTP] Error during authentication: Access denied for 'none'. Authentication that can continue: publickey
Unable to connect
Disconnected

如果後期notepad++連線上有問題,可能是不支援 PUTTY的PPK格式,直接以EXPORT OPENSSH KEY儲存 成GCP\_openssh.PPK, notepad++的private key選擇此金 鑰即可

### ssh key匯入

#### NOTPAD++ 設定

### NppFTP 設定

ofiles:		Connection	Authentication	Transfers	FTP Misc.	Cache
django		Hostname:		Connection t	type:	
		35.234.10	0.1	SFTP	~	
		Port:	]			
		Username:				
		hello 123				
		Password:		_		
			] [	Ask for pa	assword	
		Timeout (se	conds):			
		30				
		Initial remot	e directory:			
Add new Rename	Сору					

### 連線成功,可以使用notpad++進行遠端文字編輯

#### PUTTY 遠端SSH

### 到PUTTY下載putty.exe
